Fresh perspectives on how good design can create stylish yet ecologically sound living spaces in small-scale homes. Anyone who has faced the challenges of limited living space will find inspiration in this survey of the latest trends in environmentally sensitive, small-scale residential designs. More than fifty residential spaces are profiled—from woodsy houses and repurposed barns to cool apartments and urban lofts—both inside and out. Most of the projects were designed by up-and-coming architects, and each design proves that small-scale efficiency as well as beautiful, thoughtful design can overcome the apparent constraints of a small setting. Environmental impact is a growing concern, so each project was chosen because of its ecological sensitivity. Each case history describes the challenges confronting the designer and the solutions. Creating color schemes to enhance the feeling of openness, taking advantage of high ceilings to make multiple levels, and using collapsible furniture and sliding doors to maximize space are some of the design solutions that can be applied in any situation. Filled with beautiful color photographs and helpful floorplans, this book is a remarkable showcase of how good design can transform any small space into a comfortable, modern—and environmentally sensitive—home.

Loonshots reveals a surprising new way of thinking about the mysteries of group behavior that challenges everything we thought we knew about nurturing radical breakthroughs. Bahcall, a physicist and entrepreneur, shows why teams, companies, or any group with a mission will suddenly change from embracing new ideas to rejecting them, just as flowing water will suddenly change into brittle ice. Mountains of print have been written

about culture. Loonshots identifies the small shifts in structure that control this transition, the same way that temperature controls the change from water to ice. Using examples that range from the spread of fires in forests to the hunt for terrorists online, and stories of thieves and geniuses and kings, Bahcall shows how a new kind of science can help us become the initiators, rather than the victims, of innovative surprise. Over the past decade, researchers have been applying the tools and techniques of this new science—the science of phase transitions—to understand how birds flock, fish swim, brains work, people vote, diseases erupt, and ecosystems collapse. Loonshots is the first to apply this science to the spread of breakthrough ideas. Bahcall distills these insights into practical lessons creatives, entrepreneurs, and visionaries can use to change our world. Along the way, readers will learn how chickens saved millions of lives, what James Bond and Lipitor have in common, what the movie Imitation Game got wrong about WWII, and what really killed Pan Am, Polaroid, and the Qing Dynasty. “If The Da Vinci Code and Freakonomics had a child together, it would be called Loonshots.” —Senator Bob Kerrey

Catie Marron's *City Parks* captures the spirit and beauty of eighteen of the world's most-loved city parks. Zadie Smith, Ian Frazier, Candice Bergen, Colm Tóibín, Nicole Krauss, Jan Morris, and a dozen other remarkable contributors reflect on a particular park that holds special meaning for them. Andrew Sean Greer eloquently paints a portrait of first love in the Presidio; André Aciman muses on time's fleeting nature and the changing face of New York viewed from the High Line; Pico Iyer explores hidden places and privacy in Kyoto; Jonathan Alter takes readers from the 1968 race riots to Obama's 2008 victory speech in Chicago's Grant Park; Simon Winchester invites us along on his adventures in the Maidan; and Bill Clinton writes of his affection for Dumbarton Oaks. Oberto Gili's color and black-and-white photographs unify the writers' unique and personal voices. Taken around the world over the course of a year, in every season, his pictures capture the inherent mood of each place. Fusing images and text, *City Parks* is an extraordinary and unique project: through personal reflection and intimate detail it taps into collective memory
