## Building a Sustainable Home: Practical Green Design Choices for Your Health, Wealth, and Soul: Schifman, Melissa

These decisions are based on values, and the author posits that there are really only three reasons to go green:

- For Our Health: By building more sustainably, we reduce our exposure to harmful chemicals and toxins.
- For Our Wealth: By building a more durable home and being more efficient with resources like water and electricity, we reduce our monthly utility bills and ongoing maintenance expenses.
- For Our Soul: Collectively doing the right thing for our

## Building A Sustainable Home Practical

Sustainable homes also offer many practical, personal, and economic advantages including: Lower utility costs. Through such strategies as proper site orientation, the use of insulating building materials, and tighter construction to reduce drafts, sustainable homes require much less energy to heat and cool.

Building a Sustainable Home provides readers with an excellent way to cut through all the noise and find out exactly what the best products and methods are for creating a sustainable home to live in, this applies to remodels or new builds.

### What is sustainable construction and why is it important?

Adopting sustainable construction methods is not an overnight process; there are challenges to face, the greatest of which is cost. There will always be pressure on construction organisations to reduce costs where possible, but there are still concerns that sustainable construction methods will cost an organisation more.

## Building A Sustainable Home Practical Green Desig Free Books

The Smiths used straw bales with a lime render to achieve a highly sustainable home on a tight budget. A large south-facing pitched roof allowed the couple to install plenty of solar panels to provide their electricity. The supporting timber frame was constructed from reclaimed wood, adding to the abode 's eco credentials.

This fall, it could be used to build a tiny home! Green Built, a sustainable building company, has set up a Kickstarter campaign to build the HempHome: Tiny+, a small home that uses zero fossil fuels. Green Built plans to construct the Tiny+ using Hempcrete, a non-toxic, concrete-like material made from a mix of hemp, lime, and water. The home will include a green roof with solar panels, efficient mechanical ventilation, and triple-glazed windows to maintain a steady inside temperature.
